## Lead Verification Form:

An Employee from South Harrison Water Corporation has stopped by your house today to communicate with you about your service line running between your house and your water meter. Various governmental agencies at the state and federal levels, are requiring all water utilities in the entire country complete an inventory that list the service line material composition on every customer's service line that was built or installed before 1989.

We are stopping door to door on places that meet the criteria above to see if we could get a verification on the service line material type at your residence. Should the type of material remain unknown, SHWC will have to come out and spot dig around your meter to verify the material type. Doing so will keep us in compliance with these new regulations.

It would be of great service if you could provide us with the following information to help us avoid the costs that come with these new regulations. Plus, it would also keep our crews from having to dig in your yard.

**Name:** \_\_\_\_\_

**Address:** \_\_\_\_\_

**Pipe Material:** \_\_\_\_\_

### Examples:

*PVC "White Plastic"; PE tubing "Blue or Black Roll Pipe"; PEX; Copper; Iron "Black Metal"; Galvanized "Silver or Grey"; Lead "Dull Grey".*

*If you select Lead SHWC will definitely have to spot dig to verify this information.*

*All other selections will help us avoid digging in your yard.*

**Signature:** \_\_\_\_\_

Your help is much appreciated.
